

# Jetstream® 20K Check Valve

Introducing easier maintenance when pressure testing

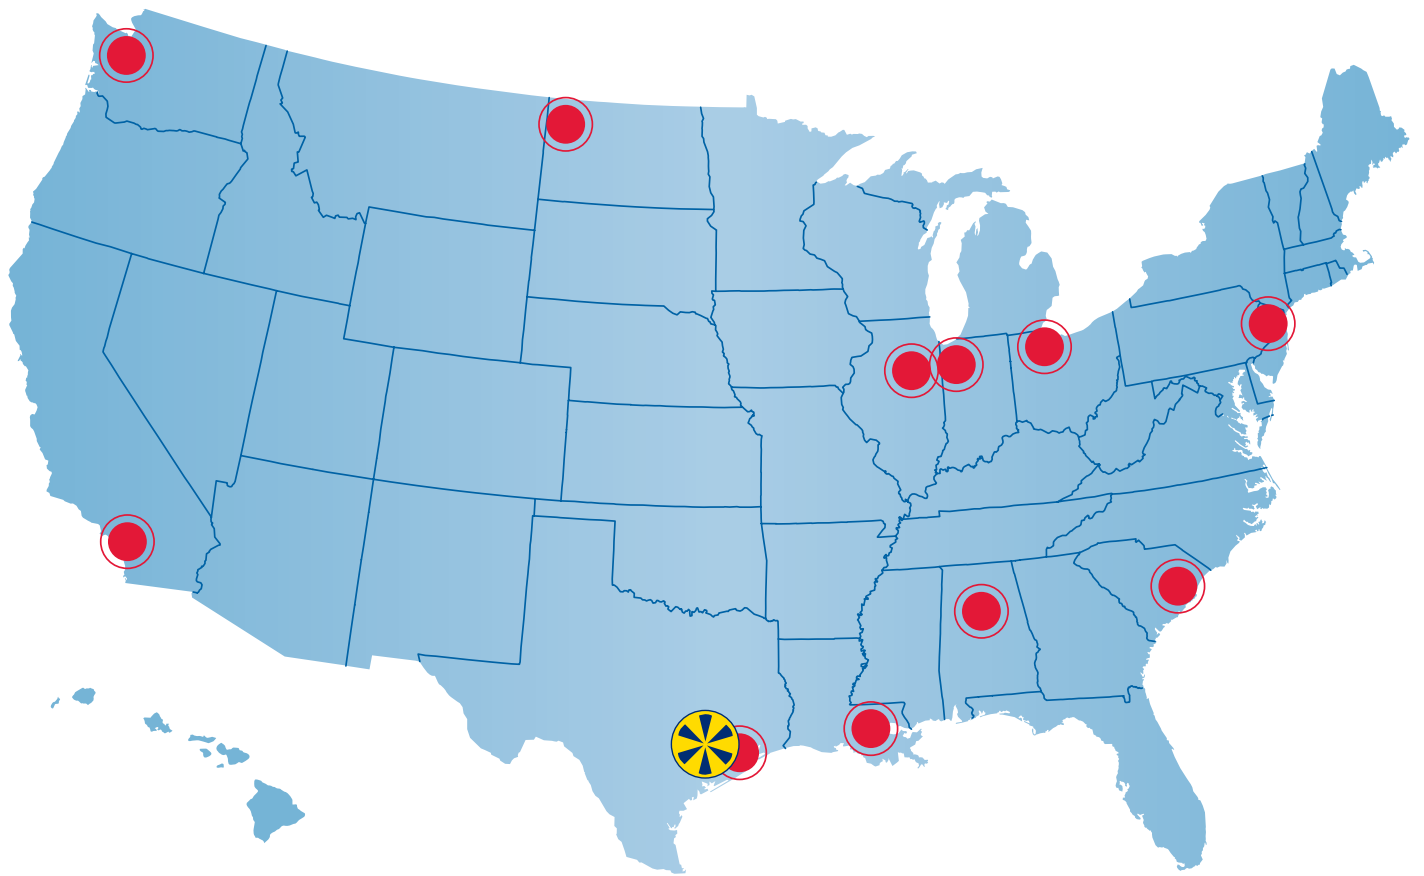

## Introducing the first 20,000 PSI cartridge-style check valve

Performing maintenance without interfering with hydrostatic pressure testing has just been made easier with the new 20K check valve from Jetstream, designed with proven cartridge technology. When configuring the plumbing to perform a hydrostatic test, check valves have typically been placed in the middle of the system, making access difficult. If maintenance is required, such as fixing a faulty or stuck valve, the entire system must be disassembled and a new valve inserted, causing downtime. With the new 20K cartridge-style check valve from Jetstream, cartridge replacement is now fast and easy. No more complete disassembly required so the job can continue with minimal interruption.

### The new Jetstream 20K Check Valve:

- Unique Y-Block, stainless-steel body style
- Quick maintenance with replacement cartridges
- No flow restrictions
- Can retrofit most current plumbing systems
- Mounting holes at the top of the valve
- Low torque connections
- Soft seal – less susceptible to wear
